MediAssist

Abstract:-The project entitled "MEDI ASSIST" is an online web application to donate medicine to the needy. This system allows several companies to donate medicines and cash. This system will help its user by providing a simple user interface for getting their medicine. Using this project each recipient can use a single platform for sailing medicine with cash. The recipient can collect medicine from the nearby branches of a particular medicine company.

The admin approves recipients and company, he manages other aspects of the website. Then the company will approve their branches at several places and manages them. The admin can add or remove companies and recipients based on their service time. The project is easy to handle, accurate and timesaving for users. The administrative property of the system provides security features though we can prevent unauthorized access of the software.

Modules:

1.User Interface:

Provides a simple and intuitive interface for users to access the system.

Allows users to request medicines and cash assistance.

2.Donation Management:

Facilitates companies to donate medicines and cash through the platform.

Administers the process of approving donations from companies.

3.Recipient Management:

Manages the registration and approval of recipients.

Allows recipients to access medicines and cash assistance.

4.Branch Management:

Enables companies to manage their branches across different locations.

Administers the approval and management of company branches.

5.Admin Panel:

Controls the overall functioning of the system.

Manages user accounts, donations, recipients, companies, and branches.

Ensures security features to prevent unauthorized access to the system.
